Palembang, South Sumatra, Indonesia

SUMMARY

Informatics Engineering graduate from Sriwijaya University with a focus on Data Science and Artificial Intelligence. Skilled in data processing, statistical analysis, data visualization, and the development of machine learning and deep learning models through academic projects and self-directed learning. Proficient in Python, SQL, Scikit-Learn, TensorFlow, and PyTorch for data analysis, predictive modeling, and AI-driven solution development. Passionate about leveraging data and artificial intelligence to support decision-making and solve real problems.

EDUCATION

Sriwijaya University | Indralaya, South Sumatra, Indonesia 2022 - 2026
Bachelor of Computer Science in Informatics Engineering – (GPA 3.92/4.00)

- Thesis: Airport Clustering in Indonesia Based on Domestic Air Transportation Traffic Using the K-Means Algorithm.
- Relevant Coursework: Machine Learning, Deep Learning, Data Science, Artificial Intelligence, and Computer Vision.

EXPERIENCE & ACTIVITIES

Yandex x Komdigi DTS Machine Learning Competition – Competitor 2025
Data Scientist / Machine Learning Developer

- Developed machine learning models to predict house prices based on property characteristics, including building size, number of rooms, land area, and supporting facilities.
- Performed data cleaning, exploratory data analysis (EDA), feature engineering, and handling of missing values and outliers.
- Built and compared Linear Regression and Random Forest Regression models to evaluate predictive performance.
- Utilized Python, Pandas, NumPy, and Scikit-Learn for data analysis, modeling, and model evaluation.

Certified Independent Study Program (MSIB) Batch 7 September 2024 – December 2024
Data Science: Greener Future with Data-Driven Solution | Startup Campus

- Analyzed the relationship between economic growth, energy consumption, renewable energy adoption, and greenhouse gas (GHG) emissions across five countries using OECD datasets.
- Developed a GHG emission prediction model using Random Forest Regression, achieving the best performance with a MAPE of 6.60% through feature engineering and hyperparameter tuning.
- Forecasted Indonesia's future GHG emissions using Prophet, achieving a MAPE of 2.21% to support long-term trend analysis.
- Developed an interactive Tableau dashboard to visualize emission trends, energy consumption patterns, and economic indicators across countries.

PROJECT

IndoBERT Sentiment Analysis — DANA App Reviews
LLM & Sentiment Classification

- Fine-tuned IndoBERT-base on 740,000 DANA user reviews from 2023–2026 for 3-class sentiment classification: negative, neutral, and positive.

- Performed EDA, rating-based sentiment labeling, text preprocessing, stratified train-validation-test splitting, tokenization, model evaluation, and error analysis using Python, PyTorch, Hugging Face Transformers, and Scikit-learn.
- Analyzed sentiment distribution and class-level performance, with the model achieving 93.59% F1-score for the positive class, while the neutral class remained the main challenge due to class imbalance and the use of ratings as proxy labels.

BI–OJK Hackathon 2025 (Hyperion Team) – Competitor 2025
Machine Learning & AI Engineer

- Developed SATUKAN, a prototype social assistance authentication system integrating facial recognition and location validation to reduce duplicate and fraudulent beneficiary records.
- Implemented FaceNet and DeepFace models for facial feature extraction and real-time identity verification.
- Built a facial authentication pipeline using Python, TensorFlow, and OpenCV, integrated into the system verification workflow.
- Collaborated with a cross-functional team to develop AI-driven solutions aimed at improving transparency in social assistance distribution.

SKILLS

Programming Languages: Python, SQL, JavaScript.
Data Science & AI: Data Analysis, Machine Learning, Deep Learning, Feature Engineering, Statistical Analysis, Time Series Forecasting, Natural Language Processing (NLP), Computer Vision.
Frameworks & Libraries: Pandas, NumPy, Scikit-Learn, TensorFlow, PyTorch, OpenCV, Flask, Streamlit.
Tools: Git, GitHub, Jupyter Notebook, Tableau, Linux, Microsoft Office (Excel, Word, PowerPoint), draw.io, Canva, Figma.
Soft Skills: Analytical Thinking, Problem Solving, Data Storytelling, Team Collaboration, Communication.
Languages: Indonesian (Native), English (Intermediate).

CERTIFICATIONS

- **SQL (Advanced) Certificate**
  HackerRank | 2025
- **Linear Models in Machine Learning: Applications**
  Digital Talent Scholarship (DTS) | 2025
- **Linear Models in Machine Learning: Fundamentals**
  Digital Talent Scholarship (DTS) | 2025
- **Generative AI with Large Language Models**
  DeepLearning.AI | 2025
- **Introduction to Machine Learning on AWS**
  Amazon Web Services (AWS) | 2025
- **Cloud, Machine Learning & Security Academy US–ASEAN Science, Technology, and Innovation Cooperation (STIC) Program**
  The ASEAN Secretariat & Arizona State University | 2025
- **Generative AI: Introduction and Applications**
  IBM | 2025
